Actively track a vehicle in real-time with SMS alerts direct to your or multiple mobile phones or view in real time via SkyNet's web Fleet Information System.

Setup your own duress alarms or breakdown alerts. These can be actively watched by Security monitoring call centers.

Activate your Remote Camera on events to take images and send them directly back to the web site, to view or be downloaded.

Define boundaries where vehicles are prohibited to go ie. dirt roads, restricted areas and be notified of breaches on the tracking interface and call center log.

Route History will be fully recorded at the secure data center to be downloaded or printed as required.

SkyNet tracking with MultiTrack and GeoGuard

The Multitrack Modem uses the SkyNet Fleet Information System (FIS) web interface or mobile phone alerts.

The web interface can be accessed securely from any internet capable computer, fleet management features can be utilised to provide detailed history or real time reports via street by street route information

- ✓ Monitor unlimited number of vehicles and/or assets;
- ✓ Request positions from vehicles and asset at any time;
- ✓ Use the street level map reference to view the location of the vehicles, staff or the entire fleet;
- ✓ Pin hole camera can plugs straight to the MutliTrack device, programmed to remotely take photographs.

Custom solutions, additionally can be designed and built by SkyNet on specific requirements, eg, to show a vehicle stopped for a predetermined time period or the vehicle leaving or entering a defined prohibited area.

Alerts sent by SMS, email or direct to the web interface. Have everything monitored 24/7 by a security company;

Real-time mapping: View speed, direction and location on a scalable map in real-time, 24/7;

SMS & Email Alert: Receive notification when predefined limits have been exceeded e.g. Speed, or a vehicle has been accessed or has entered or left a certain area;

Alarm logs can be downloaded or printed at any time;

History: tracking offers historical data on past positions and activity stored for up to 12 months.
